RIDING DRESS

- A proper riding apparel.
- Proper Riding Boots.
- Soft Leather Gloves.
- Goggles or spectacles.
- An ISI Certified helmet. (Affix light reflecting strips of stickers on the front and rear of the helmet for good visibility at night).

CAUTION

Loose clothing may get caught on moving parts of the motorcycle.

SITTING POSTURE

Correct sitting posture is a must for stable and safe riding

- Sit Straight with your shoulders completely relaxed.
- Keep your elbows close to your body.
- Hold the handle grip close to its inner end.
- Slightly grip the fuel tank with the knees.
- Keep your toes in "straight ahead" direction.
- Before turning, look extensively in the rear view mirror, without turning your head.

BRAKING

- Use both front and rear brakes simultaneously for maximum braking efficiency.
- While riding on wet or bad road conditions use brakes cautiously.

WARNING

Applying any one of the brakes suddenly may cause the motorcycle to skid.

RUNNING IN PERIOD

The Royal Enfield Motorcycle as you would be experiencing, is capable of consistent high speeds. However as with any new motorcycle, a "RUNNING-IN" procedure is essential to help in proper "Bedding-In" of the various moving parts in your motorcycle and to achieve optimum performance subsequently.

1. During the first 2000 Kms of run, do not exceed the speed limits as shown in the table below.
2. Do not exceed maximum specified pay load.
3. Warm up the engine for a few minutes at idling speed to allow engine oil to lubricate all the moving parts in the engine before riding the motorcycle.
4. Avoid full throttle operation and do not ride at constant throttle continuously. Vary the speed by 10% while riding.
5. Avoid sudden accelerations and racing starts.

Gear	Motorcycle Speed	First 500 kms	501 - 2000 kms
1		15 KMPH	20 KMPH
2		25 KMPH	30 KMPH
3		30 KMPH	40 KMPH
4		45 KMPH	55 KMPH
5		60 KMPH	70 KMPH

STARTING

- Ensure Gear is in Neutral position and the Neutral lamp is glowing in the speedometer. To shift into neutral, move the motorcycle back and forth gently, while simultaneously shifting the gear.

CAUTION

Never accelerate the engine immediately after a cold start. The engine should be allowed to run slowly for 15 to 30 seconds. This will allow the engine to warm up and let oil reach all surfaces needing lubrication. Failure to adhere in damage to the engine.

NOTE

It is mandatory, necessary to depress and hold the Manual Bi-starter for a minimum of one minute when starting the engine for the first time in cold morning, every time when the temperatures are below 10 deg C, and at higher altitudes to keep the engine idling RPM steady.

As soon as the engine sufficiently warms up then Manual Bi-starter should be released.

- Warm up engine for 2 minutes -until idling is consistent.

USING THE KICK START LEVER

- Slowly Crank Engine with the Kickstarter lever till a resistance is felt in the lever. Slightly crank slowly and further till the compression eases over.
- Release Kickstarter lever to enable it to come to its top resting position.
- Apply a powerful swinging Kick on the lever to start the engine. It may be necessary to open the throttle, very slightly, when starting on choke/first time in the morning.
- Release Choke if applied and allow Engine to run at idling speed for a few minutes.

USING ELECTRIC START

- Depress and Hold the Clutch Lever.
- Press Starter Button and hold till Engine starts. Do not release the button before Engine starts.

GEAR SHIFTING, RIDING & STOPPING

NOTE

- Release the Starter button as soon as the Engine starts.
- If Engine does not start, wait for 30 seconds before pressing the starter switch.
- A Clutch switch is provided in the system for the safety of the rider. When the motorcycle is in gear, the motorcycle cannot be started. To start in gear depress the clutch lever and press Starter button to start engine.
- Warm up engine for 2 minutes.
- Depress clutch lever.
- Press gear pedal with toe to engage 1st gear.
- Gently open throttle and release clutch lever simultaneously. If clutch is released suddenly, the engine may stall and cause the motorcycle to move with a jerk.
- To shift to 2nd and higher gears close throttle, depress clutch lever and press the gear pedal with heel.

To stop the motorcycle, close throttle, apply front and rear brakes. Simultaneously, shift gears into neutral just before the motorcycle comes to a complete stop.

- Turn the ignition switch to 'OFF' position.

Prior to starting, check to see if the low fuel indicator is glowing continuously.

This will glow continuously, if the fuel level in tank is below 2.5 litres approx.

PARKING

PARKING MOTORCYCLE ON CENTER STAND

- Select a firm, flat surface.
- Hold handle bar straight.
- Lower center stand, such that, both the legs of the stand are resting on firm ground.
- Apply pressure on the fulcrum lever on the center stand and pull motorcycle backward.

PARKING MOTORCYCLE ON SIDE STAND

- Select a firm, flat surface.
- Lower side stand and gently tilt motorcycle to the left till it rests firmly.
- A Safety switch is provided in the side stand. If the side stand is in extended position and rider engages gear to ride the motorcycle, this switch will cut off ignition and stop the engine. Please ensure side stand is retracted before starting the engine.

WARNING

Always park the motorcycle on a firm and flat surface. Parking in a soft ground may cause stand to sink and the motorcycle to fall, causing injury to you or to others and damage to the motorcycle parts.

WARNING

Do not sit on the motorcycle when it is supported on the side stand.

- Place a 4 mm thick wooden piece or cardboard sheet between the brake pads to avoid pads activation in the event the front brake lever is accidentally depressed.

FRONT WHEEL REASSEMBLY

- Remove the wooden piece / card board sheet placed between the brake pads.
- Locate small spacer and speedo drive over the wheel hub on the right side.

WHEEL REMOVAL / ASSEMBLY

- Locate stepped spacer in the left side of the hub with its larger face outside.
- Locate front wheel between the fork ends duly ensuring the spacer and the speedo drive do not fall off and the brake disc is correctly positioned between the brake pads.
- Ensure the peg in the speedo drive is correctly positioned in the slot in the right side fork end.

Insert axle through the right side fork end and gently tap it in fully.

- Locate washer and nut on the left side.

- Hold the axle from the right side and tighten nut on left side to a torque of 7 KgM (70 Nm).

- Hold the pinch bolt and tighten the U-Nut on the right side fork end.

- Rotate the wheel and check for smooth rotation.

WHEEL REMOVAL / ASSEMBLY

NOTE

Ensure the brake disc is located in between the brake pads.

- Align the caliper bracket, wheel and swing arm holes all are in one line.
- Insert and tap the rear wheel axle gently from left side.

CAUTION

Do not force the spindle into the wheel as the threads may get damaged. Tap it through the wheel gently.

- Note the alignment index marks in the both side of swing arm.

- Fix the brake hose pipe in swing arm clips properly.

CAUTION

Please check the brake hose pipe routing from Reservoir to Master cylinder, Master cylinder to Rear wheel caliper.

There should not be any twist or pinch in routing which may affect braking performance.
